

NOTICE – RESEARCH PROJECT IN PROGRESS

Study: Movements and Habitat use of Green Sturgeon, Rockfish, and Other Ocean Species

Oregon State University and NOAA are collecting information on movements and habitat use of green sturgeon and other marine species along the Oregon coast. A line of 12 underwater acoustic receivers and transmitters will be anchored off Reedsport at 43° 45.3' N. latitude from 8 fathoms to 60 fathom (see below). This equipment will be deployed on ~ September 17, 2018 and will be recovered on ~ October 8, 2018. The surface buoys resemble crab gear but are marked “RESEARCH”. If you find gear obviously adrift or grounded far from the project area, please retrieve it and contact us by email or phone shown below.

Receivers and buoys will be on a line at 43° 45.3' N. latitude at depths of 8 to 60 fathoms.

Surface floats on the research gear.

For questions or lost and found research gear, please contact:
