

CURRENT CRAB BIOTOXIN LAB RESULTS

The data below contain recent crab biotoxin data. Crab is more susceptible to taking up Domoic Acid toxin (DA) than Paralytic Shellfish Toxin (PST). Domoic Acid is measured in parts per million (ppm). The closure limit for DA in crab viscera (guts or “butter”) is 30 ppm, and the closure limit for crab meat is 20 ppm. **Results in RED mean the zone is closed for recreational and commercial harvesting.** The coast is divided into 12 zones, A through L, defined in the table below. If one zone has a domoic acid result above the limit, the two adjacent zones (one north and one south) will also be closed. This is because crab is highly mobile and travels fast. ODA and ODFW may re-open recreational harvesting in a zone if two consecutive sets of crab samples, at least one week apart, both have lab results below the closure limit and the lab results from the adjacent zones are also below the limit. Please see the Biotoxin Map on our website for recreational shellfish closure areas.

DATE	LOCATION	MEAT/VISCERA	DA
	Next sampling: to be determined		
12/02/24	J – Bandon to Cape Blanco	Viscera	2.7
